DAC Express
Customer Solution

DAC Express is a cost-effective, order entry solution which replaces outdated Telxon-type devices, and provides your customers with an innovative, easy-to-use ordering system.
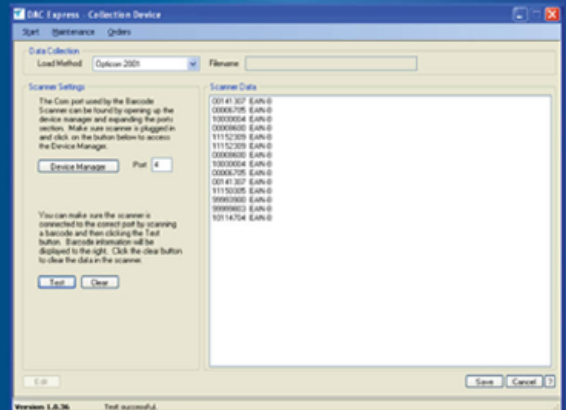

DAC Express Benefits:

- Low cost Telxon replacement
- Rapid order entry
- Compact scanner
- Scans UPCs or item numbers
- Eliminates faulty phone transmissions
- Order confirmation by e-mail
- Easy Internet software installation

Customers begin by scanning product and order quantity bar codes with a compact Opticon OPN 2001 scanner. After connecting the scanner to their PC or laptop with a USB cable, customers use DAC Express to transfer the data from the scanner to create their order. Next they can edit the order - edit order quantities, remove items from the order, and add products using item search by description, number and UPC. When the order is complete, DAC Express is used to transmit it via the Internet, and order confirmation is returned via e-mail.
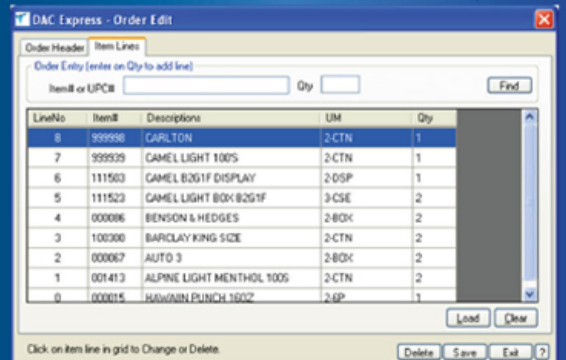

DAC Express Requirements:

- PC or laptop running Windows XP or Vista with an Internet connection
- Opticon OPN 2001 scanner

Load items from scanner

Add or delete items or change order quantities

View current orders and send to host system
